(54) Title: DEVICE AND METHOD FOR RECORDING DATA BLOCKS

(57) Abstract: The present invention relates to a method for recording at least one data block on a disc-shaped record carrier (11). Said method comprises the steps of moving a write head towards a predetermined track comprising a first location (M) to which the at least one data block is planned to be written. It also comprises a step of determining a current location (I) of the write head on the track. It finally comprises a step of determining a second location (J), which is the nearest available location on the track of the current location of the write head in the rotational sense of the record carrier, and of writing said at least one data block to said second location.

(88) Date of publication of the international search report:

31 March 2005

Date of publication of the amended claims:

26 May 2005
